DATASHEET

Advanced Reporting & Alerts Module

Advanced Reporting & Alerts Module

Keeper Security’s Advanced Reporting & Alerts (ARAM) Module empowers any InfoSec administrator to monitor any size user population and provide focused, summary trend data and real-time notifications of risky or unusual behaviors. This powerful module is built upon Keeper’s strict zero-knowledge architecture.

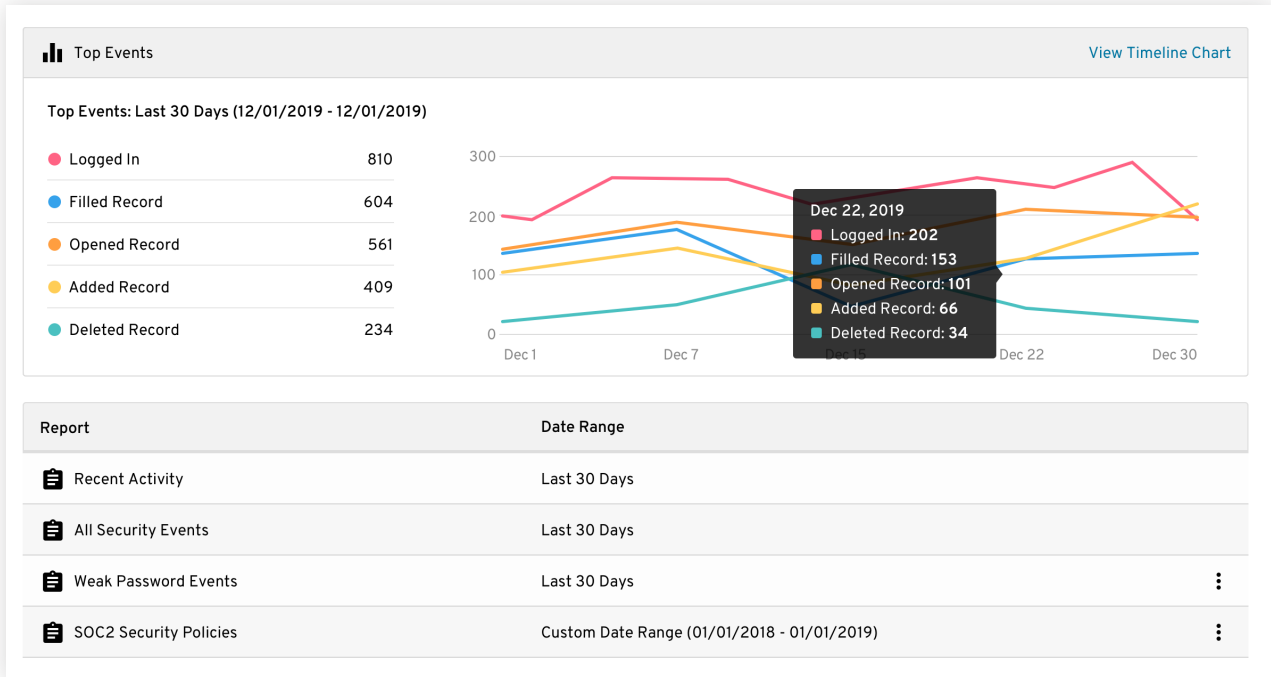

With ARAM you can identify and protect against

- Outsider breach activity
- Insider theft
- Insider sabotage

Event Timeline

- Displays Top 5 events (those with highest event counts) during a selected period
- Period selectable between: Last 30 Days, 7 Days, or 24 Hours
- Shows % of total for each event
- Customizable to show different events (other than Top 5)
- Mouseovers to show each date

Saved Reports

Customizable Reports

Create customized reports about what's important to your company and support cybersecurity audits & compliance.

Simplify your reporting to fit your needs.

- Basic report for Recent Activity includes all events
- Advanced allows customizing and saving
- Wide variety of events types & attributes to focus views
- Customizable column headings
- Exportable log data to spreadsheets, etc.
