Press Release

Keeper Security Expands Distribution Relationship With Ingram Micro Brazil to Advance Zero-Trust Cybersecurity in Latin America

Partnership provides access to Keeper's unified, AI-powered PAM platform, empowering Brazilian organizations to modernize identity security and combat cyber threats

SAO PAULO – July 20, 2026 – [Keeper Security](#), the leading zero-trust and zero-knowledge identity security and Privileged Access Management (PAM) platform, today announces the expansion of its global distribution relationship with [Ingram Micro](#) Brazil, increasing regional access to [KeeperPAM®](#), Keeper's AI-powered unified platform designed to protect privileged accounts, credentials, endpoints and infrastructure across cloud and hybrid environments.

Through Ingram Micro Brazil's network of resellers, system integrators and Managed Service Providers (MSPs), Brazilian organizations will gain streamlined access to Keeper's cloud-native PAM platform. KeeperPAM enables rapid deployment, simplified administration and measurable risk reduction without the complexity of legacy infrastructure. The AI-powered platform consolidates password management, secrets management, privileged session management, endpoint privilege management and remote browser isolation into a single control plane. Built on a zero-knowledge architecture, Keeper ensures that encryption keys and sensitive data remain fully under customer control.

As Brazil moves toward finalizing its national [cybersecurity framework](#), organizations face increasing regulatory expectations amid increasingly sophisticated, identity-driven cyber attacks. With privileged access at the center of enterprise risk, modernizing access security has become a strategic business priority.

"Cybersecurity maturity in Brazil is accelerating," said Scott Unger, Director of Global Channel Account Management, Keeper Security. "Organizations recognize that identity is the new perimeter. Privileged access must be continuously monitored, tightly controlled and governed according to zero-trust principles. Expanding our relationship with Ingram Micro Brazil enables businesses to modernize identity security with speed and confidence."

"The rise in cyber threats and regulatory requirements in Brazil is driving organizations to rethink how they control and monitor privileged access," said Alexandre Nakano, Director of Security and Networking at Ingram Micro Brazil, "Keeper's arrival significantly strengthens Ingram Micro's strategy to expand our portfolio of digital identity security solutions, one of the core pillars of modern cybersecurity architecture. With Keeper, we now offer our channel ecosystem a highly consolidated enterprise password vault solution that serves as the gateway to a broader identity and access protection platform. In Brazil, organizations have been continuously seeking to elevate their access control and monitoring standards, making this partnership even more relevant."

Modernizing Privileged Access to Minimize Risk and Simplify Security

KeeperPAM is designed to eliminate standing privileges and reduce credential compromise risk through a zero-trust, zero-knowledge architecture. Organizations gain centralized control, monitoring and auditing of privileged accounts across cloud, hybrid and on-prem environments.

Key capabilities include:

- Just-In-Time (JIT) access and Role-Based Access Control (RBAC)
- Automated credential rotation for human and machine accounts
- Real-time session monitoring
- AI-powered threat detection and response
- Passwordless, audited remote access to servers and databases
- Protection of infrastructure secrets, API keys and CI/CD pipelines
- Isolation of web-based administrative sessions

By consolidating these capabilities into a single cloud-native platform, organizations strengthen identity governance while reducing operational complexity.

Through Ingram Micro's [Xvantage™](#) digital experience platform, partners gain streamlined access to quoting, provisioning and deployment tools, accelerating time-to-value for Brazilian customers. Together, Keeper's cloud-native zero-trust architecture and Ingram Micro's distribution expertise enable organizations to rapidly implement modern privileged access controls at scale, expanding the availability of identity security across Brazil and Latin America. This collaboration builds on the established relationship between Keeper and Ingram Micro across North America, Europe and Asia, further strengthening the companies' global partnership and reinforcing a unified approach to delivering enterprise identity security solutions worldwide.
