

HOW DO YOU FLEX YOUR CYBER

Some people cause trouble on the internet. Williams Racing Formula 1 driver Alex Albon explains how to keep the troublemakers away.

What is the internet?

The internet is a magical place where you can learn new things, play fun games or watch a movie!

What are devices?

A computer, tablet and phone are types of devices that give you access to the internet – and they all need to be protected!

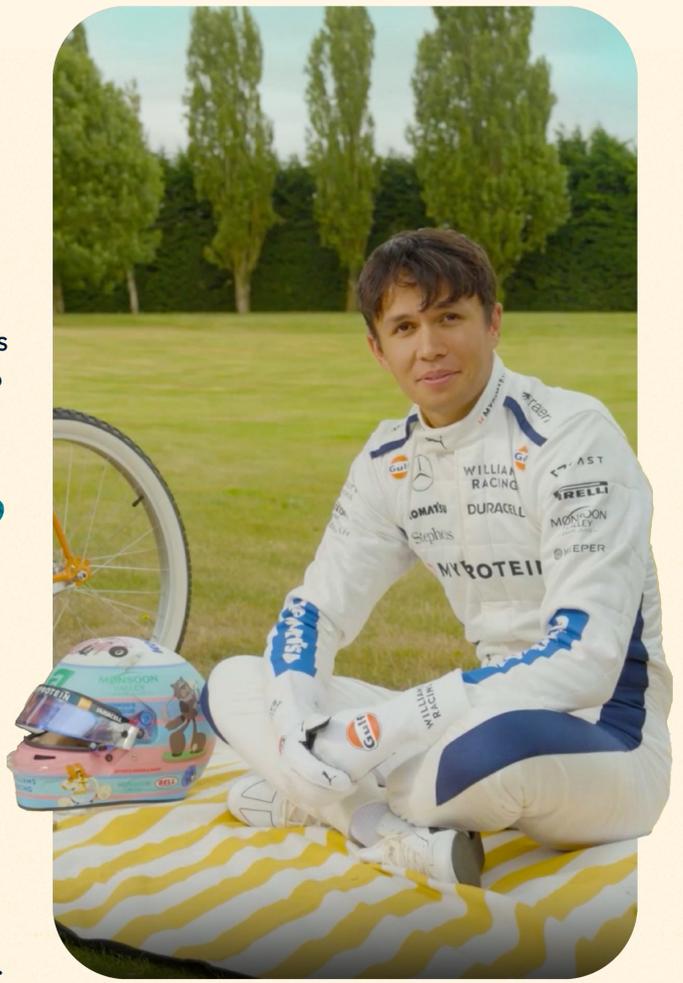

What is cybersecurity?

Cybersecurity refers to the steps you take to keep your accounts, information and devices safe from troublemakers online.

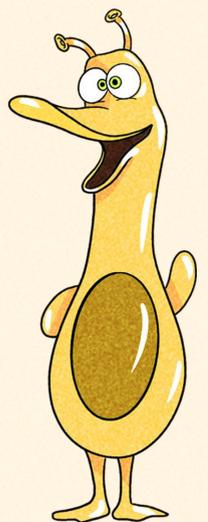

What is a password?

Passwords are secret codes you create to protect your accounts. They help you unlock games and other stuff you want to keep private.

The rules in real life apply on the internet too

- ✓ Look both ways when crossing the street or watching for scams online
- ✓ Don't talk to strangers in real life or online
- ✓ Just like you lock your bike to keep it safe, make sure to protect your accounts and devices
- ✓ If something bad happens, tell a trusted adult right away

**You always wear a helmet on your bike.
Practice safety online too!**

Spot Scams

- Some scams look official, pretending to be a club or your school.
- Fake emails usually seem urgent and ask you for private information.
- Some scams might offer something free – but they're really a trap!

Protect your Privacy

- You don't talk to strangers in real life, and you shouldn't online either!
- Instead of using your real name, try a fun screen name like number23r@cer instead!
- Never share your name, school or where you live.

Practice Cybersecurity

- Protect accounts with strong passwords and store them in a password manager.
- Lock your devices with a secret code.
- Only download apps from official app stores – and check with a trusted adult.

Remember kids, keeping your information safe online is just as important as keeping safe in the real world.

By learning how to spot scams, protect your privacy and practice cybersecurity, you can enjoy the internet while staying safe and secure.
